## Signs Your Vacuum Cleaner Needs Repair

Before searching for a repair service, identify whether your vacuum cleaner shows any of the following symptoms:

### 1. Loss of Suction

### 2. Strange Noises or Burning Smell

Loud grinding, humming, or a burning odor can indicate belt problems or motor issues.

### 3. Overheating or Shutting Off

This could be due to a blocked airflow, dirty filters, or electrical issues.

### 4. Brush Roller Not Spinning

The brush roller may be jammed or the belt could be broken, affecting performance on carpets.

### 5. Power Issues

If your vacuum won't turn on or frequently cuts out, there may be wiring faults or a faulty switch.
